Shoreline Truss Dock System

1. Traditional Truss Design

The 9" truss sides provide a lightweight dock system that looks great while maintaining both strength and durability. The lightweight truss design provides for effortless assembly, installation, and removal without sacrificing the overall stability of the dock during use.

2. Wheel-In or Standing Options

Choose the style that best suits your waterfront needs and available off-season storage space. Shoreline Industries truss style and rail style dock frames provide you with the ability to design both wheel-in and sectional standing style dock systems.

3. Recessed Decking Panels

Available with Cedar or Titan panels, Shoreline docks feature recessed decking panels for a clean, smooth appearance that prevents movement for a safe, stable walking surface.

4. Supportive Center Stringers

The aluminum cross member and center support provide additional support of the decking to provide a firm walking surface, while also improving the overall strength of the dock frame. A single center stringer provides the perfect balance to maintain a lightweight dock frame while providing increase frame strength.

5. Gravity Hanger™ or Bolt-Together Assembly

The gravity hanger system provides for quick and simple installations. In locations with rough water or where a permanent connection is desired, the truss dock frame can be bolted together using the pre-drilled frame connection holes.

DOCK SIZES:

4' x 10' Frame

DECKING OPTIONS:

Left: Cedar
Right: Titan
